The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1 and 2-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bille et al in combination with Starkweather. Bille et al teach a device such as claimed, except for the center to center distance of the mirrors and the particular order of the scanning components and scanning in a plane. Starkweather teaches a device with two scanner sthat scan in orthogonal directions, and an additional scanner for one of the directions, which is considered the X-direction. It would have been obvious to the artisan or ordinary skill to employ the galvanometric scanners taught by Bille et al in the device of Starkweather, since this is not critical; is well within the skill of one having ordinary skill in the art; and provides no unexpected result, and to provide the claimed arrangement of optical components, since this is not critical; is well within the skill of one having ordinary skill in the art; and provides no unexpected result, and to maintain the center to center distance of the mirrors of the two x-scanner and the y-scanner, since this maintain the images conjugate, thus producing a device such as claimed.
